slot type switch  
AC/DC 3-wire  
60 x 30 x 45mm

|                  |

|   |   |
|---|---|
| output                                  | change over                                   |
| switching capacity                      | max. 20 W/VA                                  |
| switching voltage                       | max. 150 V AC/DC                              |
| switching current                       | max. 1000 mA                                  |
| switch on time                          | 2,5 ms  |
| switch off time                         | 2,5 ms  |
| switching frequency                     | max. 100 Hz                                   |
| lifetime at nominal load                | 10 <sup>5</sup> to 10 <sup>6</sup> operations |
| operating temperature range             | -25°C ... +70°C                               |
| degree of protection acc. to DIN 60 529 | IP67  |
| dielectric test voltage ac (rms.) Ui    | - - - V                                       |
| on/off indication                       | - - -   |
| housing material                        | plastics                                      |
| connection                              | 1m PVC-cable<br>3 x 0,34mm <sup>2</sup>       |

Applications are inadmissible when safety of persons depends on the function of the device.
