

SafeLine MX3 replacement for TAM2

Upgrade from TAM2 to an MX3 easily with this replacement version

This cost-effective choice allows you to easily and smoothly swap current Schindler TAM2 and modernize with a new MX3+ without any modifications to the lift car.

This replacement is a customized version of the SafeLine MX3+ intended for mounting on the roof of the lift car, exactly like the TAM2. With the customized inputs intended for TAM2's existing cables, a quick change of units is possible without time-consuming re-wiring and the possibility to continue using existing alarm button/pictograms – without having to cut a single wire.

This also means that if a client wants to revert to the old system, this can be done just as easy without unnecessary trouble. Intelligent functions – flexible execution.
