

## GSM antenna cable, 5000 mm

---

### Five meter extension cable for SafeLine's standard SMA contact

For use when the GSM reception is poor and the antenna needs to be placed at a strategically better place. Also available as a ten meter extension cable (\*GSM\_ANTKABEL10M).

Please note that it is not recommended to connect more than one cable in succession as connecting more than one extension can considerably degrade the signal strength.

## Technical information

---

5000 mm cable  
SMA (male) to SMA (female)

## Included in package

---

## Technical data

---
