

SafeLine FD4, surface mounting with built-in speaker (red floor display)

The floor display with voice messages in a compact size

The FD4 is a floor display and voice announcer that displays floor designations, directional arrows, text messages and plays voice messages. This version of the floor display is intended for surface mounting and comes with an integrated speaker – a quick mounting option with only two screws that combines all parts into an all-in-one solution.

This floor display has a very compact size and suits most needs. The unit's integrated 2 MB memory means a great deal of freedom for users to tailor the unit's messages.

If more than one FD4 is used in the same system, only one main unit has to be programmed for the rest of the units in the same floor display system to show the same information, this because the units share the same bus system. This simplifies programming and configuration of the unit, something that is done easily with the help of the freeware SafeLine Pro.

Technical information

Quick installation

Easy configuration with SafeLine Pro

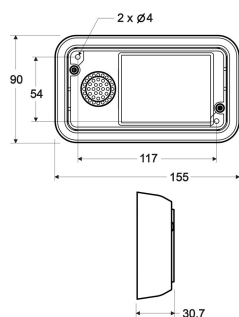

2 MB internal memory

Built-in speaker

Simple mounting with only two screws

Included in package

Technical data

Power supply: 24V

Current consumption: 50mA

Size (HxWxD): 155 x 90 x 31mm

Weight: 350g
